Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

Academic Program and Course Description Guide

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision</u>: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission</u>: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>**Curriculum Structure:**</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

Approval of the Dean

1. Program Vision

The Department of Radiology is a solid, professional scientific institution that seeks leadership and excellence among its counterparts at the national, regional and global levels and in all fields.

2. Program Mission

Preparing medical technical staff in the field of radiology and ultrasound technology to provide general and specialized medical care capable of meeting the needs of society, with high knowledge and technical skills, and with the ability to conduct scientific research and address community health problems in general and radiological diagnostic problems in particular.

3. Program Objectives

- 1. Providing a high level of education at the bachelor's level.
- 2. Creating an optimal environment for work development that stimulates and facilitates mental development and scientific research.
- 3. Purposeful and constructive policies for dealing with students and graduates.
- 4. Developing programs and curricula to achieve academic standards and meet community needs and labor market requirements.
- 5. A plan for scientific research that supports the educational process, develops research capacity, and serves the community.
- 6. Participation between the college and the community to achieve the college's mission and enhance its activities.
- 7. Increase environmental awareness among the internal and external community
- 8. Developing service and advisory cooperation with civil society institutions, community and research centers, and civil society institutions.

4. Program Accreditation

In the process of being prepared for program accreditation

5. Other external influences

Is there a sponsor for the program? Training courses Developing students' professional skills

7. Expected learnin	g outcomes of the program
Knowledge	
Learning Outcomes 1	 A1- Identifying the most important basic sciences that support radiology and sonar techniques, such as anatomy, physiology, microbiology, and other sciences. 2a- Identify the latest radiological diagnostic techniques. 3a- Identify the latest radiological devices. 4a- Identify ways to solve patient problems.
Skills	
Learning Outcomes 2	 B1- Evaluating the patient's condition and diagnosing his needs through a therapeutic interview. B2- Develop an integrated plan to apply the appropriate radiological technology in light of the needs that have been diagnosed B3- Applying therapeutic communication skills with the patient B4- Applying patient care skills B5- The ability to conduct scientific research in the field of radiation and sonar
Ethics	
Learning Outcomes 3	 C1- Consolidating human values in patient care C2- Establishing and focusing on religious values in dealing with and caring for the patient C3- Consolidating moral values in dealing with patients of different races and religions C4- Consolidating national values in providing health and medical care to patients

8. Teaching and Learning Strategies

- Giving lectures.
- Providing the college with lectures on the college website.
- Educational films.
- Projectors and digital cameras.
- Using educational models.
- Training courses and workshops.

- Applied clinical education.
- Student groups

9. Evaluation methods

- Oral exams.
- Theoretical tests.
- Laboratory practical tests.
- Practical tests on patients.
- Reports and studies.

Professional Development

Mentoring new faculty members

This is done through reviewed strategic plans, especially in order to control teaching and learning mechanisms and strategies for teaching methods according to blended education.

Professional development of faculty members

Plan and arrangements for the academic and professional development of faculty members, such as teaching and learning strategies by involving them in human resources development courses, which include five courses supervised by the Department of Studies, Planning and Follow-up, including - the administrative skills course, the self-skills course, the electronic governance skills course, the legal skills course, the financial skills course, as well as teaching methods courses. The modern approach approved by our honorable ministry adopts modern, interactive and integrated education as a curriculum for our dear university. As for evaluating learning outcomes, this is done through continuous interviews and the results of questionnaires that are distributed to students, as well as conducting field surveys of the teachers' outputs and outcomes. As for professional development, etc., it is done. Evaluating it through performance evaluation forms and through the rate of promotions provided within its tenure periods and the extent of its success.

11.Acceptance Criterion

The following categories are eligible to apply to the Department of Radiology and Ultrasound Technology

• Graduates of the biological scientific branch

• Graduates of the Medical Technical Institute/Department of Radiology and Ultrasound Technologies

12. The most important sources of information about the program

The curriculum of the college with which it has a scientific twin.

13.Program Development Plan

A reference to internal audit operations... and periodic questionnaires to employers supervising the department's graduates... and periodic meetings with graduates of the department... and field permits for the department's academic education operations... The scientific committee in the department explored drawing up development policies for the department through the following points.

1- Establishing bridges of cooperation with corresponding departments in Iraqi universities and regional universities that have legal and legal departments...

2- Concluding memorandums of scientific understanding with the corresponding departments...

3- Continuous training for teaching and academic staff...

4- Establishing teaching methods courses according to the integrated education system

General chemistry

1- Course Name:

General Chemistry

2- Course Code:

RAD115

3- Semester / Year: 1/1

First/ first

4- Description Preparation Date:

16/1/2024

5- Available Attendance Forms:

Weekly

6- Number of Credit Hours (Total) / Number of Units (Total) 2 Credit/30 hours

75 hours/ 3 unite

7- Course administrator's name (mention all, if more than one name)

Name: Yehya M. Ahmed, PhD

Email: yehyamuneeb@uomanara.edu.iq

Course Objectives

introduce the student to the science of chemistry; how to deal with chemical materials; skills for developing Algorithmic (math) problem solving

1. Teaching and Learning Strategies

Lectures

• Reports

• quizzes

2. Course Structure

2. C0	2. Course Structure					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method	
1	2	Understanding and assimilation	The atom molecular structure electronically distribution Chemical bonding	lecture	Oral and written Examination	
2	2	Understanding and assimilation	Liquid mixture, Buffer solutions-types	lecture	Oral and written Examination	
3	2	Understanding and assimilation	Quant & qualitative analysis methods	lecture	Oral and written Examination	
4	2	Understanding and assimilation	Molar & normal concentrations & method. Problems & discussion	lecture	Oral and written Examination	
5	2	Understanding and assimilation	Acids, base –examples.	lecture	Oral and written Examination	
6	2	Understanding and assimilation	Oxidation & reduction.	lecture	Oral and written Examination	
7	2	Understanding and assimilation	Principles of organic chemistry Hydrocarbons Alkenes	lecture	Oral and written Examination	

			preparation properties reactions			
8	2	Understanding and assimilation	Alcohols – Ketones - Aldehydes - Carboxylic acids classification & properties	lecture	Oral and written Examination	
9	2	Understanding and assimilation	Aromatic hydrocarbons Carbohydrates –classification & reactions	lecture	Oral and written Examination	
10	2	Understanding and assimilation	Amines aryl amines	lecture	Oral and written Examination	
11	2	Understanding and assimilation	Introduction to biochemistry, and the machinery of life	lecture	Oral and written Examination	
12	2	Understanding and assimilation	Biochemistry and nutrition	lecture	Oral and written Examination	
13	2	Understanding and assimilation	Sugars, starches and fibers	lecture	Oral and written Examination	
14	2	Understanding and assimilation	Isomers, classifications	lecture Oral and writ Examinatio		
15	2	Understanding and assimilation	Electrolytes, electrochemistry	lecture	Oral and written Examination

Physics of atom

- 1. Course Name:
- Physics of atom
- 2. Course Code:

RAD123

3. Semester / Year:

Second/ first

- 4. Description Preparation Date:
- 16/2/2024
- 5. Available Attendance Forms:
 - weekly
- 6. Number of Credit Hours (Total) / Number of Units (Total)
 - 75 hours/ 3 unit
- 7. Course administrator's name (mention all, if more than one name)
 - Name: Muhanna Al-Batat
 - Email: albatathani7@gmail.com
- 8. Course Objectives
- 1. Define the atomic and Nuclear Structure.
- 2. Learn the types of the ionization radiation.
- 3. Know the mechanism of radiation interaction with matter.
- 4. Define the interaction scatter radiation with matter.
- 5. Discuss the types of attenuation coefficient.
- 8. Define nanotechnology science, types of nanomaterials synthesis, and their applications.
- 9. To inform students as to the importance of renewable energy in the energy mix required for generation within nations.
- 10. The students will acquire sharp knowledge on nanotechnology based alternate source of energy.
- 11. The students may work on advanced materials for renewable and green energy.
- 12. The students will get a clear understanding of Solar technology.
- 14. They will also understand the importance of energy storage techniques.
- 15. They will be clear about the role of nanotechnology in improving the efficiency in energy usage.

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1.	2	Understanding and assimilation	Atomic and Nuclear Structure. – Fundamental particles – Nuclear Binding energy – Nuclear Stability– Auger electrons	Lecture	Theoretical exam and classroom activities

2.	2	Understanding and assimilation	Radioactive Decay – Radioactive materials – Activity – Half life	Lecture	Theoretical exam and classroom activities
3.	2	Understanding and assimilation	•Types of radiation – Alpha particles Beta particles Gamma radiation Others, Decay models	Lecture	Theoretical exam and classroom activities
4.	2	Understanding and assimilation	Classification of Radiation – Electromagnetic radiation – Particulate radiation – Ionizing and non-ionizing radiations Electromagnetic Energy – Velocity and Amplitude – Frequency and Wavelength	Lecture	Theoretical exam and classroom activities
5.	2	Understanding and assimilation	Wave Model: Visible Light Particle Model: Quantum Theory Matter and energy • Interactions of photons with matter • Mechanisms of Energy Loss – Photoelectric effect – Thomson scattering – Coherent (Rayleigh) scattering	Lecture	Theoretical exam and classroom activities
6.	2	Understanding and assimilation	Incoherent scattering – Pair and triplet production – Compton scattering by free electrons – Scattering and energy transfer coefficients – stopping power	Lecture	Theoretical exam and classroom activities
7.	2	Understanding and assimilation	• Photon Attenuation Coefficients – Linear attenuation coefficient – Exponential attenuation – Mass attenuation coefficient – Energy-Absorption coefficient	Lecture	Theoretical exam and classroom activities
8.	2	Understanding and assimilation	Interactions of electrons with matter – Ionizational (collisional) interactions – Radiative Interactions – stopping power	Lecture	Theoretical exam and classroom activities
9.	2	Understanding and assimilation	Introduction of Nanomaterials – Properties of nanoparticles – Types of nanoparticles	Lecture	Theoretical exam and classroom activities

			Synthesis Routes – Bottom-		
10.	2	Understanding and assimilation	Up Approaches – Top-Down Approaches – Applications of nanomaterials in medicine & biology	Lecture	Theoretical exam and classroom activities
11.	2	Understanding and assimilation	Nanotechnology in renewable energy systems – Energy transport, conversion and storage – Nano, micro and meso scale phenomena and devices. Energy sector products using nanomaterials – Light emitting diodes – Batteries – Catalytic reactors Capacitors, Super capacitors	Lecture	Theoretical exam and classroom activities
12.	2	Understanding and assimilation	Nanotechnology to Hydrogen Production – Photocatalytic Water Splitting Reaction Nano Semiconductor Materials for Photocatalytic Water Splitting – Photolytic H2 Evolution Based on Nanoenhanced Materials	Lecture	Theoretical exam and classroom activities
13.	2	Understanding and assimilation	Nanomaterials for the Conversion of Carbon Dioxide into Renewable Fuels and Value-Added Products – Theoretical Potentials for Electrochemical Reduction of CO2 – Effect of Particle Size on Electrode Performance in Electrochemical CO2 Reduction Reaction	Lecture	Theoretical exam and classroom activities
14.	2	Understanding and assimilation	Nanomaterials and Direct Air Capture of CO2 – Capture or Separation Technologies – New Roads into CO2 Capture: Direct Air Capture and Nanomaterials	Lecture	Theoretical exam and classroom activities
15.	2	Understanding and assimilation	Solar energy technology – Availability of solar radiation – Photovoltaic devices – Dye sensitized solar cells – Photoelectrochemical cells for hydrogen production	Lecture	Theoretical exam and classroom activities

equipment technologies1

1-	Course	Name:
----	--------	-------

Radiological medical equipment technologies1

Course Code:

#### **RAD214**

Semester / Year: first and second semester for second stage

First/ Second

Description Preparation Date:

13-4-2024

Available Attendance Forms:

weekly

Number of Credit Hours (Total) / Number of Units (Total)

60 hours \8 units

Course administrator's name (mention all, if more than one name)

Name: Hayder Qasim Alsaedi

Email: hayderkalaf84@gmail.com

**Course Objectives** 

from this study students will learn about X-Ray machine (Shapes and sizes ) will explaine to them X-ray tube

Operating consoleline compensation, autotransformer

KVp adjustment, mA control

Exposure timer, checking a timer

High voltage transformer, voltage rectification

phase power, high frequency generators

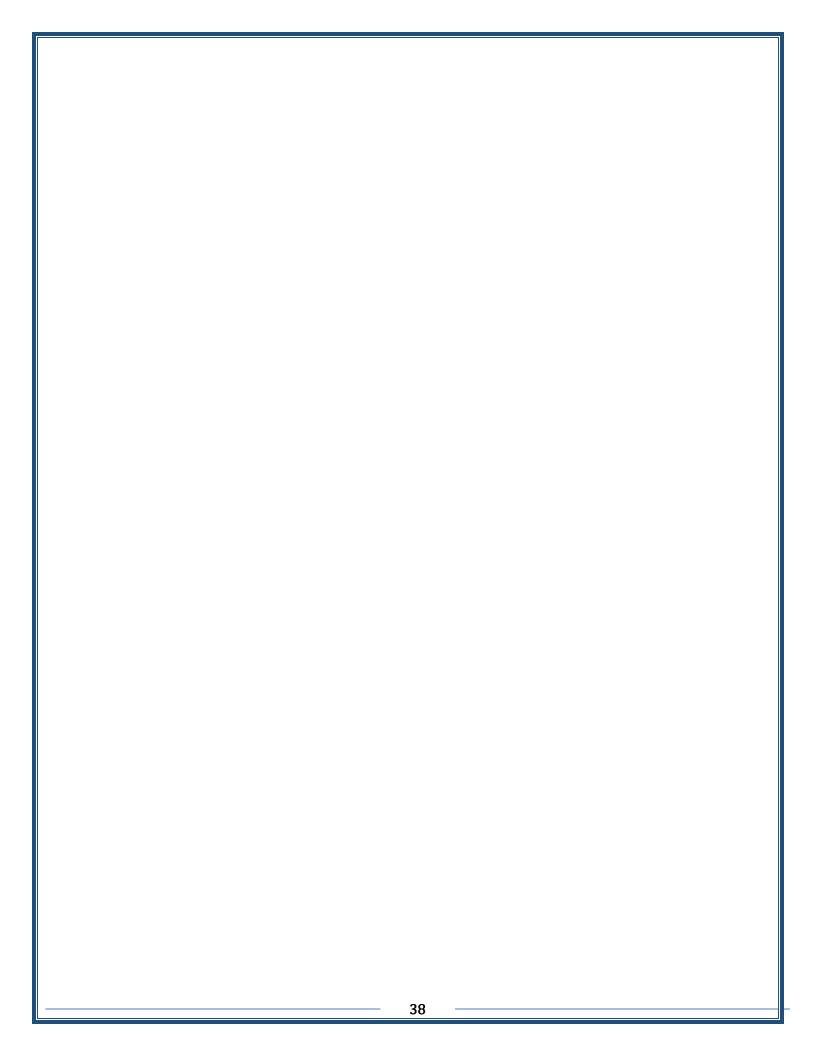

Intensifying screens Screen characteristics, screen film combination, care of the screen ,Ultrasound transducer,Ultrasound transducer ,Mammography

13-	Teaching and Learning Strategies
Strategy	• Lectures
	• Reports
	• Quizes

#### 14- Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1.	2	Understanding and assimilation	<ul> <li>X-Ray machine system:</li> <li>Operating console: - line compensation, - autotransformer, -</li> <li>KVp adjustment, - mA control -</li> <li>Exposure timer</li> </ul>	Lecture	Theoretical exam and classroom activities
2.	2	Understanding and assimilation	High voltage generators: – transformers, – voltage rectification, – phase power types, – x-ray circuits – Effect of waveform on radiation output & image quality	Lecture	Theoretical exam and classroom activities

3.	2	Understanding and	X-ray tube: – Basic design – Line	Lecture	Theoretical exam and
		assimilation	focus principle – Heel effect		classroom activities
4.	2	Understanding and	X-ray tube failure: – Causes of X-ray	Lecture	Theoretical exam and
	-	assimilation	Tube Failure – Results – Remedy	Lecture	classroom activities
			Construction of film, Intensifying		
5.	2	Understanding and	screens, cassette.	Lecture	Theoretical exam and
	2	assimilation	Processing the latent image: –	Lecture	classroom activities
			Manually – Automatically		
			Filters – Types – Half-value layers		
6.		Understanding and	Control of scatter radiation: - Beam		Theoretical exam and
0.	2	assimilation	restrictors, - The grid (Characteristics	Lecture	classroom activities
		assimilation	of grid construction, grid ratio, grid		
			frequency)		
7.	2	Understanding and	Grid types: - linear, crossed, focused,	Lecture	Theoretical exam and
	-	assimilation	moving grids	Lecture	classroom activities
			Digital radiography: Computed		
8.	2	Understanding and	Radiography (CR): – System	Lecture	Theoretical exam and
	2	assimilation	apparatus, - mechanism of work -	Lecture	classroom activities
			Image processing		
			Direct to digital radiography (DDR):		
9.	2	Understanding and	• Flat Panel Detectors (DR):	Lecture	Theoretical exam and classroom activities
	-	assimilation	• Indirect conversion detector (a-Si)	Lecture	
			Direct conversion detector (a-Se)		
10.	2	Understanding and	Image quality: - Contrast - Resolution	Lecture	Theoretical exam and
	-	assimilation	– Noise	Lootare	classroom activities
11.	2	Understanding and	Unsharpness – Magnification –	Lecture	Theoretical exam and
	-	assimilation	Distortion – Artefacts	Leetare	classroom activities
12.	_	Understanding and	Mammography: – Imaging system	Lecture	Theoretical exam and
	2	assimilation	equipments, – Types of mammography		classroom activities
			systems. Film-sceen system		
12		The desired in the second	– Digital mammography (FFDM) –		TT1
13.	2	Understanding and	CEDM – Breast tomosynthesis –	Lecture	Theoretical exam and
		assimilation	Computer-aided detection (CAD) –		classroom activities
			Scintimammography		
14		Understanding and	Fluoroscopy: – Traditional imaging	Lecture	
14.	2	Understanding and	system apparatus & mage		Theoretical exam and classroom activities
		assimilation	Intensification – Digital Fluoroscopy –		classroom activities
			Digital subtraction angiography Bone density scan (DEXA scan): –	+	
ſ			Imaging system apparatus –	1	
15.	2	Understanding and	Mechanism	Lecture	Theoretical exam and
	2	assimilation	Orthopantomogram (OPG): – Types, –	Lecture	classroom activities
			Mechanism

### Second Stage

### **Second Semester**

## Special radiological procedures ( biliary and reproductive system

1. Course Name:

Special radiological procedures of biliary and reproductive system

2. Course Code:

#### **RAD221**

3. Semester / Year:

Second/ Second

4. Description Preparation Date:

#### 5. Available Attendance Forms:

6. Number of Credit Hours (Total) / Number of Units (Total)

105 hours / 5 unite

7. Course administrator's name (mention all, if more than one name)

Name: Ayoob Dinar Abdullah

Email: ayoobdinara81@gmail.com

8. Course Objectives

To teach the students how to direct the patient in particular way to photograph to see diseases in the best way for lower limbs

9. Teaching and Learning Strategies

10. Cou	10. Course Structure								
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method				
1.	2	Understanding and assimilation	Methods of imaging of hepatobiliary system	Lecture	Theoretical exam and classroom activities				
2.	2	Understanding and assimilation	U/S of the liver, gall bladder and biliary system	Lecture	Theoretical exam and classroom activities				
3.	2	Understanding and assimilation	CT for the liver biliary tree.	Lecture	Theoretical exam and classroom activities				
4.	2	Understanding and assimilation	MRI of the liver	Lecture	Theoretical exam and classroom activities				
5.	2	Understanding and assimilation	Intraoperative & postoperative T- t ube,cholangeography	Lecture	Theoretical exam and classroom activities				
6.	2	Understanding and assimilation	Biliary drainge	Lecture	Theoretical exam and classroom activities				
7.	2	Understanding and assimilation	Methods of imagings of urinary tracts Excretion urography	Lecture	Theoretical exam and classroom activities

# Radiological anatomy of lower limbs

1. Course Name:

#### **Radiological anatomy of lower limbs**

2. Course Code:

#### **RAD222**

3. Semester / Year:

Second/ Second

4. Description Preparation Date:

#### 5. Available Attendance Forms:

6. Number of Credit Hours (Total) / Number of Units (Total)

90 hours / 4 unite

## Course administrator's name (mention all, if more than one name) Name: Assist Prof. Dr. Hayder Dawood Saleem Email: <u>hayderdawood@uomanara.edu.iq</u>

8. Course Objectives

At the end of the course, the student will be able to know:

1. The general anatomy and radiological features of the lower limbs.

2. The general anatomy and radiological features of the lower limbs joints.

3. The general anatomy and radiological features of the arterial blood supply of lower limbs as well as venous drainage.

9. Teaching and Learning Strategies

#### 10. Course Structure Week Hours Required Unit or subject name Learning **Evaluation method** Learning method **Outcomes** Theoretical exam and Understanding and 1. Bony pelvis (pelvic girdle): 2 Lecture assimilation sacrum, coccyx & hip bones. classroom activities Differences between male & Theoretical exam and Understanding and 2. 2 female pelvis, Radiological Lecture assimilation classroom activities features of the pelvic bones. Normal anatomy of the femur, Theoretical exam and Understanding and 3. 2 Lecture radiological features of femur assimilation classroom activities bone. Ossification centers. Normal anatomy of the tibia Theoretical exam and Understanding and 4. bone, radiological features of 2 Lecture assimilation tibia bone. Ossification classroom activities centers. Normal anatomy of the fibula bone, radiological features of Theoretical exam and Understanding and 5. fibula bone. Ossification 2 Lecture assimilation center. Normal anatomy of classroom activities patella, radiological features of patella & ossification center

			of patella.				
6.	2	Understanding and assimilation	Normal anatomy of the foot: components: tarsals,	Lecture	Theoretical exam and		
		assimilation	metatarsals & phalanges.		classroom activities		
7.	2	Understanding and	Radiological features of the foot: tarsal, metatarsal &	Lecture	Theoretical exam and		
	-	assimilation	phalanges.		classroom activities		
8.	2	Understanding and	Hip joint: type of joint, articular surfaces, capsule &	Lecture	Theoretical exam and		
	Δ	assimilation	ligaments of hip joints.	Leciule	classroom activities		
9.		Understanding and	Hip joint: Radiological		Theoretical exam and		
	2	assimilation	features of hip joint. Dislocation of hip joint.	Lecture	classroom activities		
10.		Understanding and	Knee joint: type of joint,		Theoretical exam and		
10.	2	assimilation	articular surfaces, capsule,	Lecture	classroom activities		
			ligaments of knee joint. Knee joint: Internal structures				
11.	2	Understanding and	of knee joint. Radiological	Lecture	Theoretical exam and		
		assimilation	features of knee joint.		classroom activities		
12.	2		Understanding and	Ankle joint: type of joint,		Theoretical exam and	
12.		2 Onderstanding and assimilation	articular surfaces, capsule, ligament. Radiological	Lecture	classroom activities		
			features of ankle joint.				
13.	2	Understanding and	Blood supply of lower limbs:	Lecture	Theoretical exam and		
	Δ	assimilation	Arteries of the lower limb.	Lootare	classroom activities		
14.	2	Understanding and	Radiological features of the	Lecture	Theoretical exam and		
	2	assimilation	lower limb arteries.	Lecture	classroom activities		
15.		Understanding and	Veins of the lower limb,		Theoretical exam and		
101	2	assimilation	Radiological features of the lower limb veins.	Lecture	classroom activities

## **Computed Tomography Equipment Techniques**

1. Course Name:

Computed Tomography Equipment Techniques

2. Course Code:

#### **RAD224**

#### 3. Semester / Year:

Second/ Second

4. Description Preparation Date:

#### 5. Available Attendance Forms:

#### 6. Number of Credit Hours (Total) / Number of Units (Total)

#### 105 hours/ 5 unite

#### 7. Course administrator's name (mention all, if more than one name)

Name: Hayder Qasim Alsaedi

Email: hayderkalaf84@gmail.com

#### 8. Course Objectives

1. List and describe the various generations of computed tomography (CT) imaging systems.

- 2. Relate the CT imaging system components to their functions. Discuss image reconstruction via interpolation, back projection, and iteration.
- 3. Explain the helical imaging & multidetector-row CT.
- 4. Describe CT image characteristics of image matrix.
- 5. Clarify the factors affects the CT image quality, as it relates to spatial resolution, contrast.
- 6. Determine the common CT image artefacts. 7. Identify other technical applications of CT Imaging.

#### 9. Teaching and Learning Strategies

10. Cou	10. Course Structure								
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method				
1.	2	Understanding and assimilation	History of Computed Tomography – Limitations of conventional radiography	Lecture	Theoretical exam and classroom activities				
2.	2	Understanding and assimilation	Basic principles of CT Scanners : Generations of CT – First-generation – Second-generation – Third-generation – Fourth- generation – Fifth- generation CT , electron beam (EBCT)	Lecture	Theoretical exam and classroom activities				
3.	2	Understanding and assimilation	Helical/spiral CT Scanners: Requirements for Volume Scanning: – slip-ring teccnolgy – dual source	Lecture	Theoretical exam and classroom activities				
4.	2	Understanding and assimilation	<ul><li>Interpolation Algorithms</li><li>Pitch</li></ul>	Lecture	Theoretical exam and classroom activities				

5.	assimilation Tomography (I		Multislice Computed Tomography (MSCT) (multidetector-row) CT	Lecture	Theoretical exam and classroom activities
6.	6. 2 Understanding and CT assimilation & I image X-1 in I		CT system design: (SSCT & MSCT) – X-Ray imaging system (gantry): – X-Ray Tube, X-Ray tubes in MSCT (Straton x-ray tube)	Lecture	Theoretical exam and classroom activities
7.	2	Understanding and assimilation	<ul> <li>Collimation, - Filtration</li> <li>Detector: Detector</li> <li>Characteristics &amp; types</li> </ul>	Lecture	Theoretical exam and classroom activities
8.	2	Understanding and assimilation	• Control Console • Computer system: image display, recording, storage, and communication system. • Patient Table or Couch	Lecture	Theoretical exam and classroom activities
9.	2	Understanding and assimilation	Reconstruction methods: – Backprojection reconstruction – Filtered Backprojection	Lecture	Theoretical exam and classroom activities
10.	2	Understanding and assimilation	- Iterative reconstruction	Lecture	Theoretical exam and classroom activities
11.	2	Understanding and assimilation	CT image quality: – Image contrast – Spatial resolution	Lecture	Theoretical exam and classroom activities
12.	2	Understanding and assimilation	– Image noise	Lecture	Theoretical exam and classroom activities
13.	2	Understanding and assimilation	<ul> <li>Image artifacts: Types and causes Common artifacts and correction techniques</li> </ul>	Lecture	Theoretical exam and classroom activities
14.	2	Understanding and assimilation	<ul> <li>Positron Emission</li> <li>Tomography/CT</li> <li>(PET/CT) Single-Photon</li> <li>Emission/ CT</li> <li>(SPECT/CT)</li> </ul>	Lecture	Theoretical exam and classroom activities
15.	2	Understanding and assimilation	□ Advanced technical CT applications: – CT Angiography – Cardiac CT Imaging – CT fluoroscopy	Lecture	Theoretical exam and classroom activities

### **Radiographic techniques 2**

1- Course Name:

Radiographic techniques 2

25.Course Code:

#### **RAD313**

26.Semester / Year:

#### Third

27.Description Preparation Date:

17/2/2024

28. Available Attendance Forms:

Weekly

29.Number of Credit Hours (Total) / Number of Units (Total)

180 hours / 8 unite

#### 30. Course administrator's name (mention all, if more than one name)

Name: Alaa Sabeeh Shenawa Email: alaaunisydney@gmail.com

#### **31.Course Objectives**

To teach the students how to direct the patient in particular way to photograph to see diseases in the best way for head chest, spinal cord and abdomen

#### 32. Teaching and Learning Strategies

Strategy	Lectures
	Practice on different x-ray machine
	Learning from practical viedio
	quizzes

#### 33. Course Structure

Week	Hours	<b>Required Learning</b>	Unit or subject	Learning method	Evaluation
		Outcomes	name		method
1	2 2	Understanding and assimilation	Lines & planes of projection of the skull	Lecture	Theoretical exam and classroom activities
2			skull

#### 10. Course Structure Week Hours Required Unit or subject name Learning Evaluation Learning method method Outcomes 2 Understanding Review Theoretical 1 and assimilation Structure of the Atom exam and Lecture **Radiation Units** classroom ALARA principles activities Diagnostic X-Ray Room 2 2 Understanding and assimilation Measurement of Area Radiation Levels Theoretical Leakage Radiation exam and In-room Scattered Radiation Lecture classroom Measurement activities Protective Barrier/Shielding Assessment Area Radiation Level Checklist Medical Sources: Occupational and 3 2 Understanding and assimilation Patient Doses Ionizing radiation interactions with Theoretical tissue Radiobiological effects at the cellular exam and Lecture and whole body level classroom genetic and somatic effects of ionizing activities radiation deterministic effects stochastic effects

			probability coefficients for tissues at risk effective dose Threshold and non-threshold effects.		
4	2	Understanding and assimilation	Radiation protection principles Justification Optimization Limitation	Lecture	Theoretical exam and classroom activities
5	2	Understanding and assimilation	Radiation protection principles applied to medical diagnostic procedures Radiation protection of patients who are or might be pregnant Practical measures for the reduction of patient dose Some dose-saving equipment Some dose-saving techniques High-risk examinations	Lecture	Theoretical exam and classroom activities
6	2	Understanding and assimilation	Risks from radiological examinations Explaining radiation risks to patients Personal protection and personal monitoring - how, why, when, where dose limits typical doses to staff and associated risks protection of staff and members of the public protection of patients	Lecture	Theoretical exam and classroom activities
7	2	Understanding and assimilation	physical factors affecting radio- sensitivity 1. Linear energy transfer 2. Relative biologic effectiveness 3. Fractionation and protraction	Lecture	Theoretical exam and classroom activities
8	2	Understanding and assimilation	Biologic factors affecting Radio sensitivity 1. Oxygen effect 2. Age effect 3. Sex effect 4. Recovery 5. Chemical agents	Lecture	Theoretical exam and classroom activities
9	2	Understanding and assimilation	Early effects of Radiation Acute radiation syndrome Hematologic syndrome Gastrointestinal syndrome Central nervous system syndrome Local tissue damage Skin Gonads Extremities Hematologic depression	Lecture	Theoretical exam and classroom activities

			Cytogenetic damage		
10	2	Understanding and assimilation	Late effects of radiation Leukemia Other malignant disease Effect of fetal irradiation Prenatal death Neonatal death Congenital malformation Childhood malignancy Fetuses irradiated in utero	Lecture	Theoretical exam and classroom activities
11	2	Understanding and assimilation	Radiation dose-response relationships Linear dose-response relationships Non- Linear dose-response relationships Constructing a dose-response relationships Linear, quadratic dose-response relationships Radiolysis of water Direct and indirect	Lecture	Theoretical exam and classroom activities
12	2	Understanding and assimilation	Maximum permissible dose whole body non-occupational exposure Partial-body occupational exposure X-ray and pregnancy 1. The pregnant technologist 2. Management principles 3. The pregnant patient	Lecture	Theoretical exam and classroom activities
13	2	Understanding and assimilation	Designing for radiation protection Design of X-ray apparatus Design of protective barrier thickness	Lecture	Theoretical exam and classroom activities
14	2	Understanding and assimilation	Factors affecting barrier thickness Occupational Exposure	Lecture	Theoretical exam and classroom activities
15	2	Understanding and assimilation	Patient dose Patient dose in special examinations Reduction of occupational exposure Reduction of unnecessary patient dose Unnecessary examinations	Lecture	Theoretical exam and classroom activities
